

Computer Maintenance

Icons and Taskbar

Icons for the **Start Menu**, **Windows Explorer | File Explorer**, **CCleaner**, **BleachBit** and **Firefox** are displayed on the **Taskbar**. The other icons are located in the **Pinned** area of the **Start Menu**.

Daily Maintenance (run this application daily before you shut down the system)

CCleaner

1. Close all programs.
2. Click **CCleaner** (icon is a large red "C" with a paintbrush) on the **Taskbar**.
3. Click **Run Cleaner**.
4. **CCleaner** will close automatically after it runs.
5. **NOTE:** This program has a special configuration. Please **DO NOT** install or update this application manually; call or email for support.

Monthly Maintenance (run at least once a month)

Malwarebytes

1. Click the **Start Menu**.
2. Click **Malwarebytes** in the **Pinned** area and **wait** (~30 seconds) for the program to display.
 - a. Close and ignore any marketing or advertising ads that may appear before or after the scan.
3. Click the **Scan** button and wait for the Threat Scan to complete.
 - a. If the Threat Scan summary displays anything other than 0 (Zero), follow the instructions to quarantine and remove the object(s) or call for support.
4. Click **Done**.
5. Close **Malwarebytes**.
6. **IMPORTANT: Restart** the computer **immediately** to finalize the process and reset the application services.

BleachBit (optional application; may not be on the Taskbar)

1. Close all programs.
2. Click **BleachBit** (icon is a square with a paintbrush) on the **Taskbar**.
3. Click **Clean**.
4. **BleachBit** will close automatically after it runs.
5. **NOTE:** This program has a special configuration. Please **DO NOT** install or update this application manually; call or email for support.

Defragment and Optimize Drives (optional application; may not be in the Pinned area)

1. Close all programs.
2. Click the **Start Menu**.
3. Click **Defragment and Optimize Drives** in the **Pinned** area to open the program.
4. Select **OS (C:)** and click the **Optimize** button.
5. Select **Storage (S:)** and click the **Optimize** button.
6. Wait for the **Current Status** to display **OK (...)** on both drives.
7. Close **Optimize Drives**.

Updates, Instructions, Additional Software and Support

Windows Updates

1. To manually check for updates, click the **Start Menu**.
2. Click **Windows Update** in the **Pinned** area to open the **Settings** window.
3. Click the **Check for updates** button (top right) and **wait** for the system to check for updates.
 - a. Some updates are not installed automatically. If a special update is available, a "**Download & install**" button will display next to the update. Click the button to process the update.
4. Click **Restart now**, when prompted, to finalize the update process.
5. **NOTE:** Windows updates are generally available from Microsoft the **second Tuesday** of every month; most updates will occur automatically in the background; system may request a restart periodically to complete the Windows update.

Special Instructions

1. Shut down the computer when not in use; laptops **will not** hibernate or sleep when the lid is closed per this configuration.
2. To power off, click the **Start Menu**, click **Power** and select **Shut down**; wait for all lights to go out (except the Power light if the system is plugged in) before you close the lid on a laptop.
3. **NOTE:** If **Update and shut down** or **Update and restart** options display when you select **Power** from the **Start Menu**, **ALWAYS** select **Update and restart**; updates will process and the system will restart; run **CCleaner** and **Shut down** the system.
